WL-100C

CONNECTED SUNRISE & SUNSET SIMULATOR

Lanaform Connect
app included

Sunrise and sunset
simulator

Aural support
for sleep

2 configurable
alarm times

Light is essential in our daily lives. In addition to its function in the formation of images through our retina, light plays an important role in our sensations and brain functions, depending, in particular, on the duration of exposure to which we are subjected.

While in nature everything is based on sunrise and sunset, our way of life imposes on us at certain times of the year the need to get up before the first rays of light and to go to sleep after sunset.

These gradual and natural transitions from darkness to light and back again are important signals for our body and regulate our functioning and well-being.

Sunrise and sunset simulator

The WL-100C is both a **sunrise simulator** and a **sunset simulator**. Just like a real sunrise, **the brightness gradually increases** over a period of 30 minutes until a bright yellow light illuminates your entire room, promoting natural awakening. When the light fills your room, the natural sound you have chosen will be played to wake you up on the right foot.

In the evening, once you are in bed, the light decreases for a chosen period of time (15, 30, 60 minutes), allowing you to **fall asleep gradually** and at the same rhythm as the sun sets.

A personal and connected experience

The Lanaform Connect app allows you to set multiple alarms, light themes and light intensity settings, and to control sounds and the radio from your Android and iOS smartphone. If your phone is not nearby, all the functions are also available on the sunrise and sunset simulator. Connecting to your iOS or Android device gives you full control over your experience.

Lanaform Connect

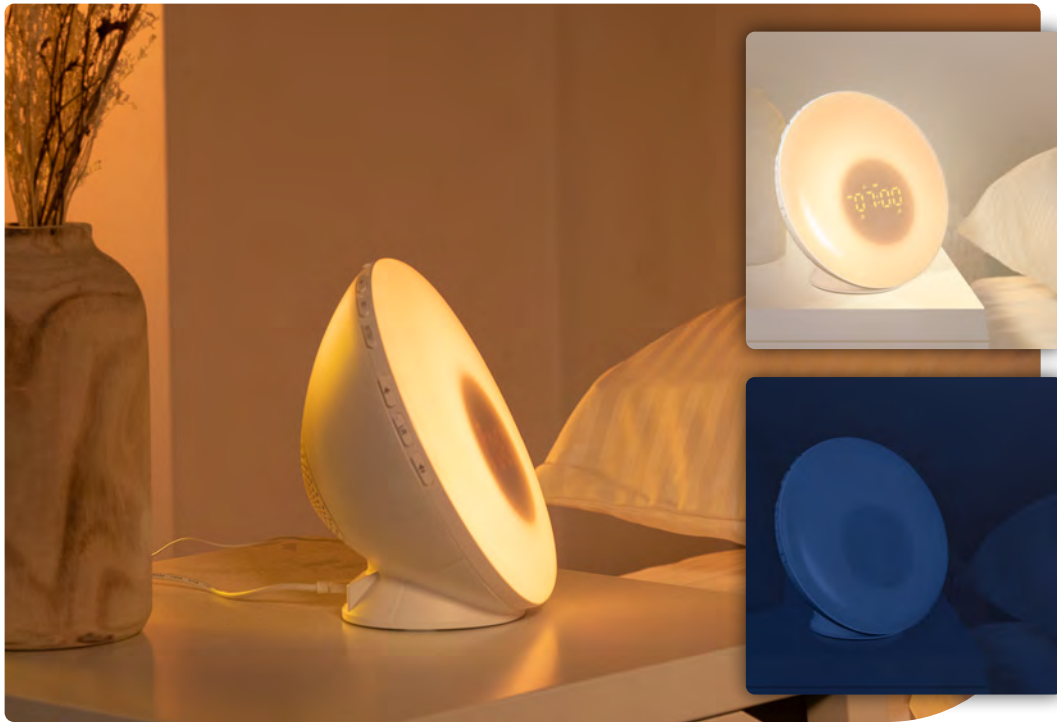

Sleep aid function

The WL-100C has a **sleep aid with 6 sounds** specially developed to help you fall asleep. These continuous neutral sounds, using specific frequencies, are used to cover ambient noise. The diffusion of these sounds promotes a **relaxing effect** in the user, the user's brain activity decreases and the worries that would prevent them from falling asleep take a back seat.

Snooze function

Activate the snooze function by pressing the top of the device to turn off the sound and snooze some more.

Adaptability to the surrounding environment

Do you want to enjoy darker surroundings while you sleep? No problem: **the display's light intensity automatically adjusts to the room's brightness level**, but you can also turn it off completely.

Easy Bluetooth® configuration

Once you have activated the Bluetooth and installed the Lanaform Connect app on your smartphone, it only takes a few minutes to set up the WL-100C.

A sunrise and sunset simulator but not only that...

The WL-100C is also a **bedside lamp** that you can set to the intensity you want, whether for reading or for discreet lighting at night when you need it.

Would you like to **listen to music**? It's easy with the WL-100C and its programmable stations and favourites list.

In addition, thanks to the USB port, you can **charge your smartphone** directly from the WL-100C connected sunrise and sunset simulator.

WL-100C

CONNECTED SUNRISE & SUNSET SIMULATOR

LA190203

WL-100C features

- Multi-functional sunrise and sunset simulator:
 - Wake-up light,
 - Sunrise simulator,
 - Sunset simulator,
