

LANAFORM

Evolutionary Scale

2 IN 1 SCALE

During the first few months of a baby's life, it is important for young parents to monitor the development of their baby's weight curve.

An Evolutive scale versatile

Evolute Scale is versatile scale suitable for the whole family with its **detachable baby tray**. Once your baby becomes too big for the tray, the baby scale can be converted into weighing scale for the whole family.

With its slim design and non-slip rubber feet, the Evolutive Scale means that you can safely weigh your baby **sitting or lying down** to within an accuracy of 5 grams up to 20 kg and 50 grams from 20 kg up to 150 kg.

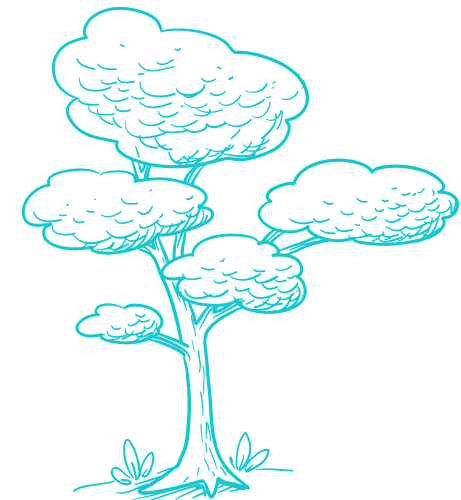

Function variation

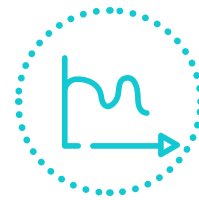

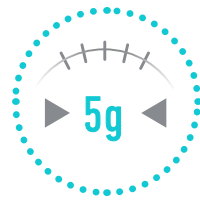

It is very easy with the **Function variation** to monitor the baby's growth curve between two visits to the paediatrician. Each time the weight is measured, the Evolutive Scale automatically displays the difference (positive or negative) from the last recorded weight.

Hold & Tare

What's more, the Evolutive Scale has a **weight stabilisation** system so that even the wriggliest of babies can be accurately weighed and a "**Tare weight**" function allows you to weigh your baby easily using a towel.

- ★ Detachable baby tray with a contoured surface guaranteeing comfort and maximum safety

- ★ Max. capacity of scale: up to 150kg

- ★ Accuracy: $\pm 0.005\text{kg}$ (0.05kg-20kg)
 $|\pm 0.05\text{kg}$ (20kg-150kg)

- ★ HOLD function stabilises the weight measurement for wriggly babies

- ★ Tare weight function deducts the initial weight so perfect for using a towel

- ★ Function variation calculates the difference between the new weight measurement and the previous weight measurement

- ★ Easy to clean

- ★ Weight measuring unit: kg/lb/oz

- ★ Switches off automatically

- ★ Low battery alert and overloading

- ★ Supplied with 3 AAA batteries

Evolutionary Scale

New Baby Scale

Feature	Baby scale (with detachable baby tray) Personal digital scale	Baby scale
Capacity	150 kg	18 kg
