WARM AND COOL MIST AIR HUMIDIFIER

Top-filling

COOL & WARM MIST

## A commitment to your health

We breathe approximately 20,000 times each day, representing a daily requirement of 12,000 litres of air. The quality of the air we inhale in this way has a direct impact on our well-being: air that is too humid can give rise to health problems (allergies, asthma, etc.), while overly dry air dries out the mucous membranes and skin, contributes towards fatigue and sensations of discomfort and, at the same time, increases air pollution.

Doctors and specialists agree on **an optimum humidity level of between 40 and 60%**. The ambient air may become too dry, particularly in winter, because of the lack of ventilation and heating, etc. Although we don't always realise it, this impacts on our physical and mental well-being and alters the overall quality of the air by promoting its pollution.

## What does relative humidity level mean ?

Relative humidity is the percentage ratio between the quantity of water present in the air at any given time and the maximum quantity of water that the air can contain at a given temperature. For example, at a relative humidity of 50%, the air contains just half of the maximum amount of water it is capable of containing at this temperature. This level is measured using a hygrometer.

## Cool mist or warm mist, a response to every need

The NAPO air humidifier allows you to **check and adjust** the humidity level of your interior, using either a cool mist (up to 300 ml/hr), or a warm mist (up to 400 ml/hr).

The warm mist function means that most of the bacteria present in the water that is heated using electrical resistance can be removed. **The steam is lukewarm and healthy** at the device's outlet. It spreads quickly in the atmosphere while providing a little additional heat.

The cool mist has the advantage of providing a **refreshing effect** in summer, by avoiding the disadvantages caused by fans: drying out the air and mixing impurities (dust, allergens, etc.). This function is also less energy-intensive.

## A comprehensive and customised control of the humidity level

The **4.5-ltr capacity** of the reservoir means you can humidify your air for hours according to the parameters you require. In fact, **you define the humification level** either by choosing from the 3 emission intensities, or by determining the humidity level you want to reach in your room. Manage the emission optimally with the 360° adjustable nozzle. You may also decide to adjust the operating time from **1 to 12 hours**.

The NAPO will stop automatically, either when the reservoir is empty, or when the humidity level you require has been reached or even at the end of the programmed timer. It also has a **"night mode"** so that you can enjoy the comfort of humidified air automatically, continuously and in peace while you are sleeping.

Do you want to add a touch of light to your living room? The humidifier has colour-alternating or fixed **LED atmospheric lights**, depending on your preferences.

## Management largely facilitated with the opening through the top

The NAPO is one of a new generation of ultrasonic humidifiers, the reservoir of which is **filled through the top** by removing a lid and not through a small opening in the base. This opening through the top greatly facilitates the everyday management of the device, when filling and emptying the reservoir, or even when cleaning it.

**The reservoir is also equipped with a handle, making handling and transport very convenient.** Furthermore, the two notches located at the base of the humidifier mean that you can safely move it with its base as you need to and want to.

## Combining the useful with the pleasant using aromatherapy

The NAPO is equipped with a tray for holding the essential oils of your choice. Pour a few drops of them onto the tray. They will then be efficiently diffused in the ambient air at the same time as the air is being humidified. **You will thus combine the benefits of aromatherapy with those of humidification** to obtain optimum air quality.

With its many functionalities that optimise the experience of humidification, the PO is a complete product that fits in perfectly in your home.

## Features :

- Cool mist (max 300 ml/hr)
- Warm mist (max 400 ml/hr)
- Humidity control
- Convenient filling through the top
- 4.5-ltr capacity
- +/- 11 hours of continuous diffusion at 400 ml/hr
- Adjustable 360° direction of emission
- Touch control
- Timer function (1 to 12 hrs)
- Diffusion of essential oils
- Colour-alternating or fixed atmospheric light
- LED screen
- Water level visible
- Empty reservoir warning
- Switches off automatically

Master Box Dimensions  
70,5 x 46,5 x 37,7 cm

Master Box Weight  
16,11 kg

Colour Boxes / Master Box  
6

Colour Box Dimensions  
23,1 x 22,6 x 35,1 cm

Colour Box Weight  
2,48kg

Voltage / Power  
24 V
