Muscular electro stimulation as a remedy for heavy legs

Age, sedentary lifestyle and certain conditions can cause **poor blood circulation in the legs**, with symptoms of pain and **swelling of the feet**.

The Circulation Mat uses electro stimulation as a **treatment for heavy legs**. In order to maintain an active lifestyle, continuing to **tone up leg muscles** and give them relief is essential.

Improve blood circulation in the legs

Muscular electro stimulation (EMS) is a proven technology in the sport and medical fields, causing contraction then **relaxing of the muscles** using **painless electric stimulations**.

Applied to the feet, it causes contraction of muscles in **swollen legs and feet**. In addition to **toning the legs**, it acts as a pump on the veins to make the blood go back up to the top of the body, in fact, actually replicating the **natural action** of walking! The effects can be felt right from the very first use.

Providing relief to your legs has never been easier

The Circulation Mat offers you 25 minute sessions, to be carried out daily during any leisure activity sitting down. You can also discretely **provide relief to your legs at the office**, thanks to the mat's **ultra-slim design** and its tiny battery that can be recharged by USB.

The **electro stimulation mat** can also be carried anywhere very easily as it folds up and slides into its light and compact carry case.

Swollen feet and leg pain will be a thing of the past!

Features

Muscular electro stimulation (EMS)

15 intensities & 25 minutes in 2 modes

Remote control

Rechargeable battery by USB

Ultra-slim and foldable mat & carry case

Non-slip surface
